WEATHER SYNOPSIS BY REGION

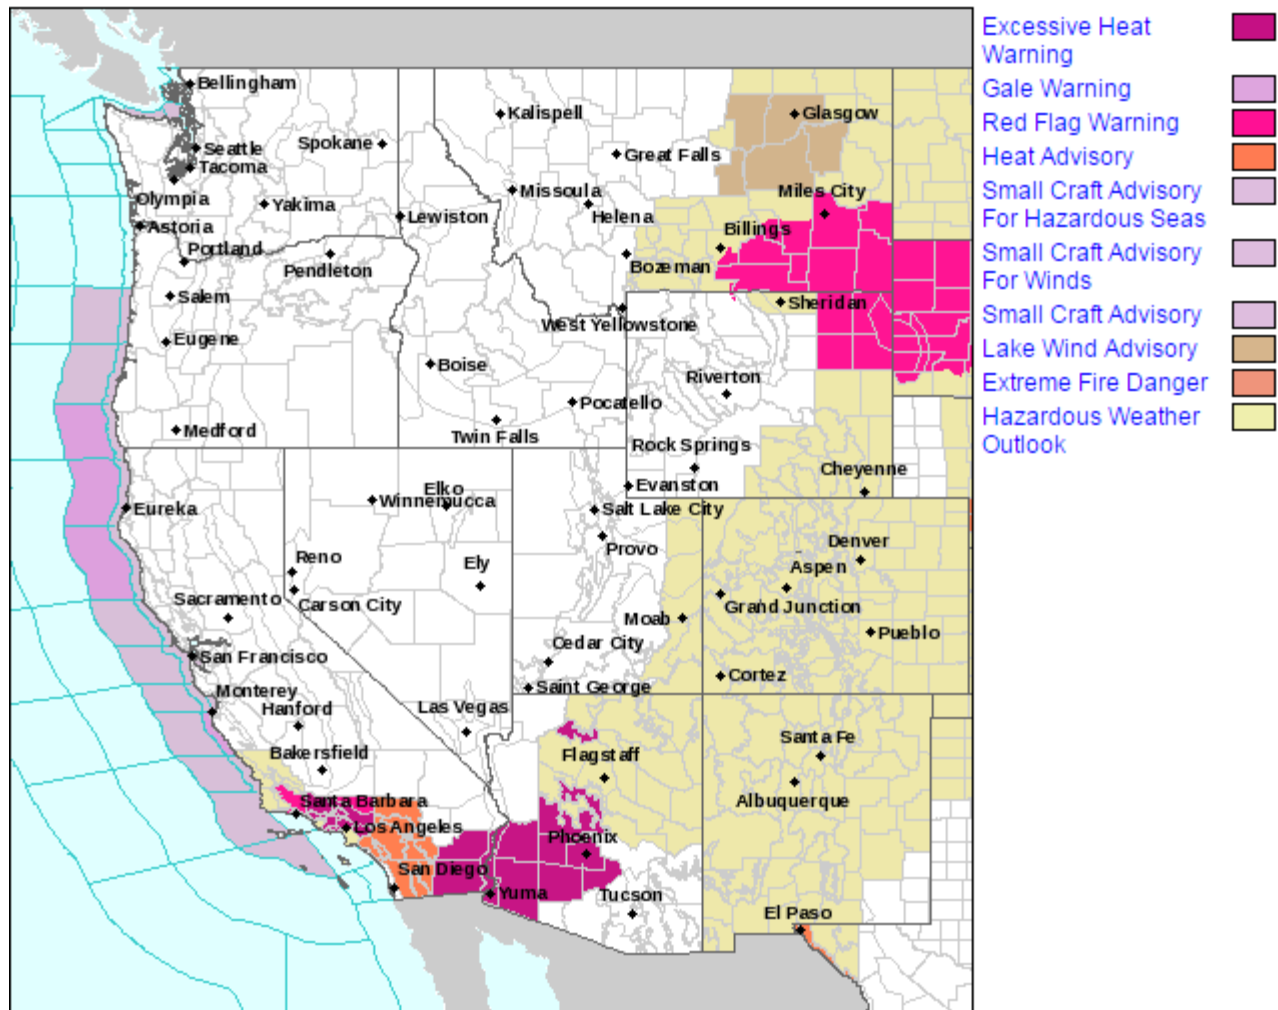

NORTHERN CALIFORNIA

High pressure will build over Southern California and the Eastern Pacific over the next few days, but a weak low pressure trough will remain over Northern California. A northwest to northeast downslope surface wind pattern is producing local gusts to 20-30 mph this morning in and around the Sacramento Valley. These winds will continue at lighter speeds this afternoon, with gusts only reaching 15-20 mph in wind-prone areas. Humidity will drop to 5-15% this afternoon, and only recover to 20-30% tonight. These winds will return each night during the 7-Day period, but light upslope/up-valley winds are expected each afternoon beginning Sunday. Poor overnight RH recovery will be common in inland areas each night. Temperatures throughout the region will be a few degrees above normal through Monday. Beginning Tuesday the high pressure ridge will push over Northern California and temperatures will increase further. Afternoon highs around 110 may become possible in the warmest inland valleys by the middle of the week. The coastal marine layer will be shallow and only affect areas near the immediate coast.

SOUTHERN CALIFORNIA

High pressure aloft coupled with a north to south pressure gradient will allow strong, downsloping winds to continue over portions of Southern California today. Early this morning, wind gusts over 25 mph are occurring in the Santa Ynez Range and in the Canyon Country area of northern Los Angeles County. Temperatures in these areas were close to 90 degrees at dawn with RH in the teens. Expect winds of 15-25 mph with gusts to 40 mph throughout the day in Santa Barbara and northern Los Angeles County. Winds may slacken a bit this afternoon, but a renewed burst of winds may occur this evening. Other areas, including the Kern County Mountains will see northwest winds of 15-25 mph with gusts to 35 mph this afternoon. All winds should decrease this evening and much lighter winds are expected Sunday through the first half next week. Widespread single digit RH is expected across the district today at elevations below 6,000 feet. RH recovery tonight should be better overall, but Santa Barbara and northern Los Angeles County may see just enough mixing to keep RH in the 20% range overnight. Temperatures will continue to be 10-20 degrees above normal today with highs up to 108 in the valleys and foothills of Southern California. The coast will see temperatures dip a bit as onshore flow develops this afternoon. Sunday through Tuesday, expect a cooling trend as the high pressure area overhead buckles and moves eastward. Highs will still be a bit above normal, but by Monday, most valleys will see highs back in the 90s with RH minimums generally in the teens. All long range models indicate south and southeasterly flow will transport monsoonal moisture into the area during the middle of next week. Expect scattered wet thunderstorms over the desert Wednesday with the possibility of storms reaching the San Bernardino and Cleveland National Forest by next Thursday. RH will be much higher by the middle of next week. Highs will begin to climb toward 100 again in the valleys by Wednesday and hot, humid weather can be expected to continue into next weekend..
